

How to update a wallet

In this guide we will explain how to update a wallet:

First we open the wallet (in this case Trittium) so we can verify the wallet version at the bottom left.

We can check for updates through our official channels (Discord, website, or directly on GitHub).

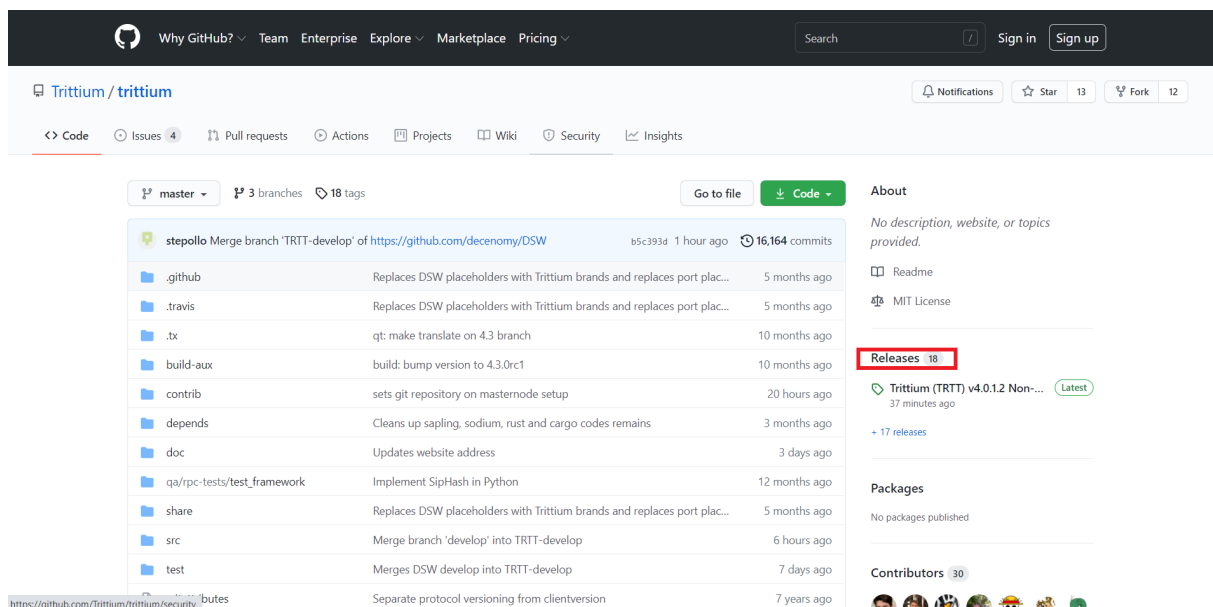

After we have verified that there is an update to be done (in some cases the updates are mandatory otherwise the wallet will stop working) we have to download the latest version, in the case of Trittium we can find it on GitHub at the following address:

<https://github.com/Trittium/trittium>

The GitHub address should be copied and pasted into the address bar as in the image below:

Entering the GitHub site you will have this screen:
Then click on the right on the RELEASES link.

And this screen will appear:

The screenshot shows the GitHub Releases page for the Trittium (TRTT) project. The top navigation bar includes links for Code, Issues (4), Pull requests, Actions, Projects, Wiki, Security, and Insights. The 'Releases' tab is selected, showing the latest release, v4.0.1.2, by stepollo2, released 40 minutes ago. The release title is 'Trittium (TRTT) v4.0.1.2 Non-Mandatory Update'. The description states: 'Dear Trittium (TRTT) friends, This new version of the wallet is non-mandatory and introduces the following improvements: Just ignore the peers, instead of banning them by asking data more than once;'. Below the description, there is a section for 'Assets 8' which lists the following files and their sizes:

Asset	Size
TRTT-4.0.1.2-aarch32.zip	25.9 MB
TRTT-4.0.1.2-aarch64.zip	27.7 MB
TRTT-4.0.1.2-Linux.zip	26.7 MB
TRTT-4.0.1.2-MacOS.zip	36.2 MB
TRTT-4.0.1.2-Windows.zip	25.4 MB
TRTT-4.0.1.2-WindowsSetup.zip	18.1 MB
Source code (zip)	
Source code (tar.gz)	

As we can see the latest version is V4.0.1.2, which is different from our wallet (ours was V4.0.1.1)

Now we choose the correct version for our operating system (in our case Windows) then the one for Windows will be TRTT-4.0.1.2-Windows.zip

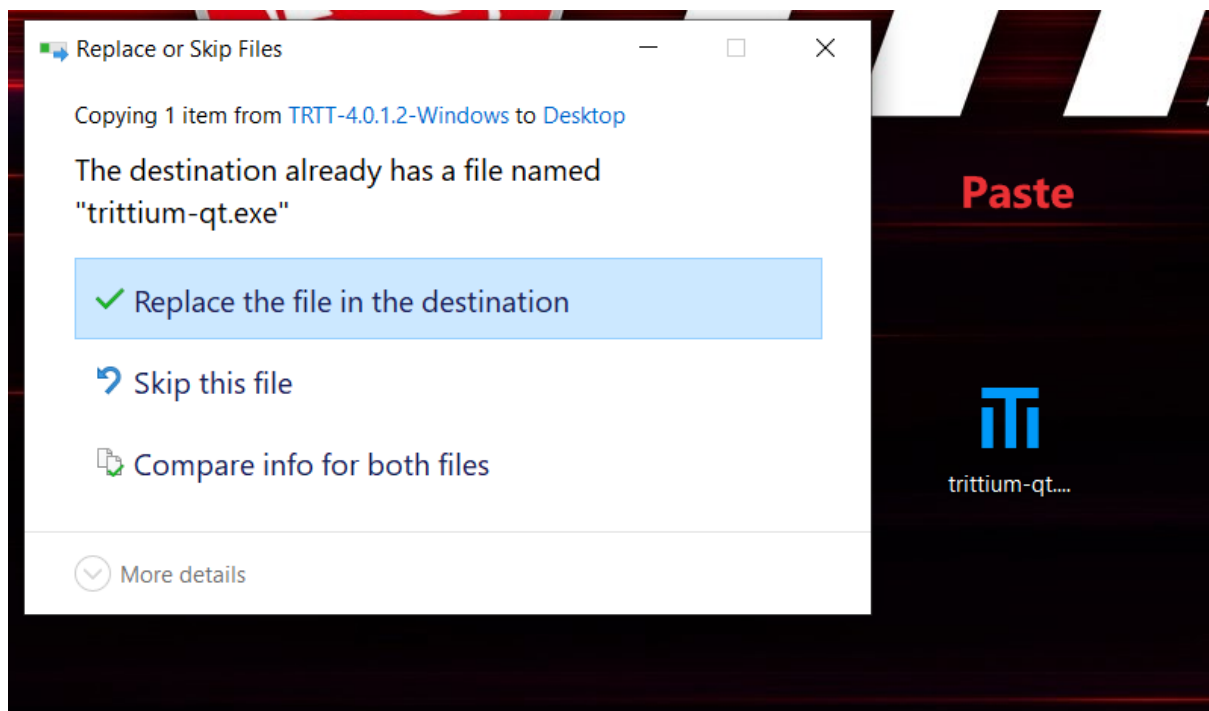

This is a close-up view of the 'Assets 8' section from the previous screenshot. It lists the following assets:

- TRTT-4.0.1.2-aarch32.zip
- TRTT-4.0.1.2-aarch64.zip
- TRTT-4.0.1.2-Linux.zip
- TRTT-4.0.1.2-MacOS.zip
- TRTT-4.0.1.2-Windows.zip** (highlighted with a red box)
- TRTT-4.0.1.2-WindowsSetup.zip
- Source code (zip)
- Source code (tar.gz)

Once the file has been downloaded, we can go back to our wallet to close it.
Once this is done, go to the download folder and extract the zip
which contains the new version of the wallet as in the image below:

Once the file has been extracted we can copy "trittium-qt" and paste it (in this case in the desktop) to replace the previous version, in the next images you will see how:

Now we can start our wallet which will be updated and ready to be used.
