

How to update a masternode collateral

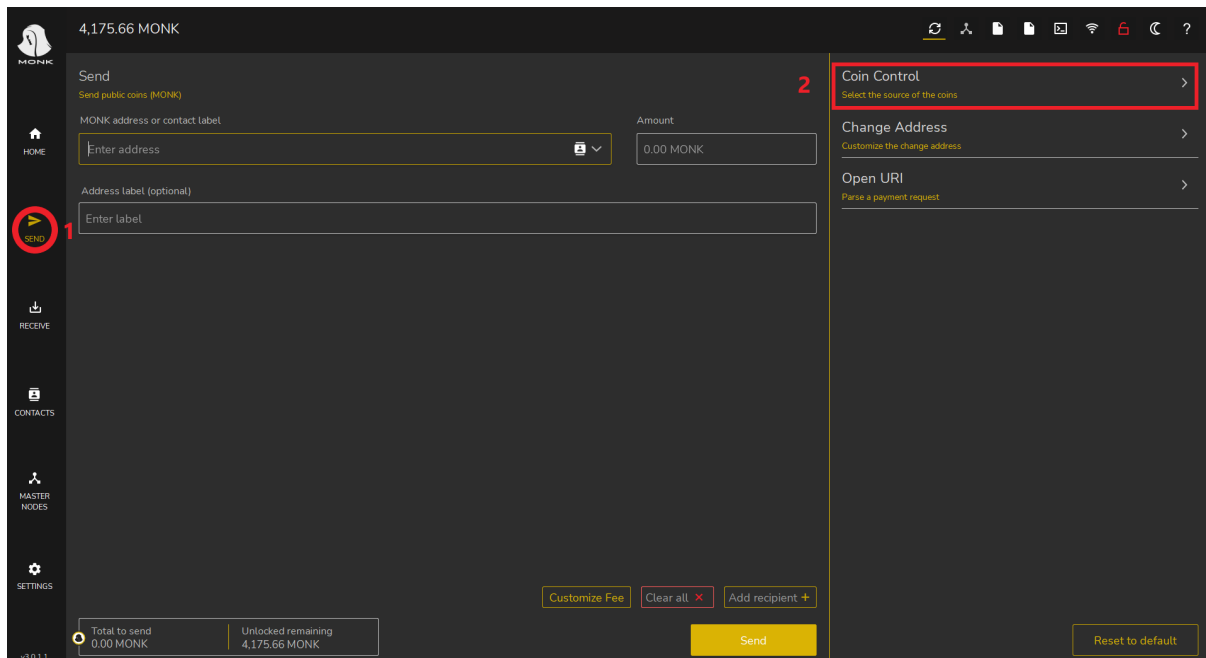

Let's open our wallet (in this case Monk)

The collateral has increased from 4000 to 8000 Monk and as we can see from the masternodes menu our masternode is missing.

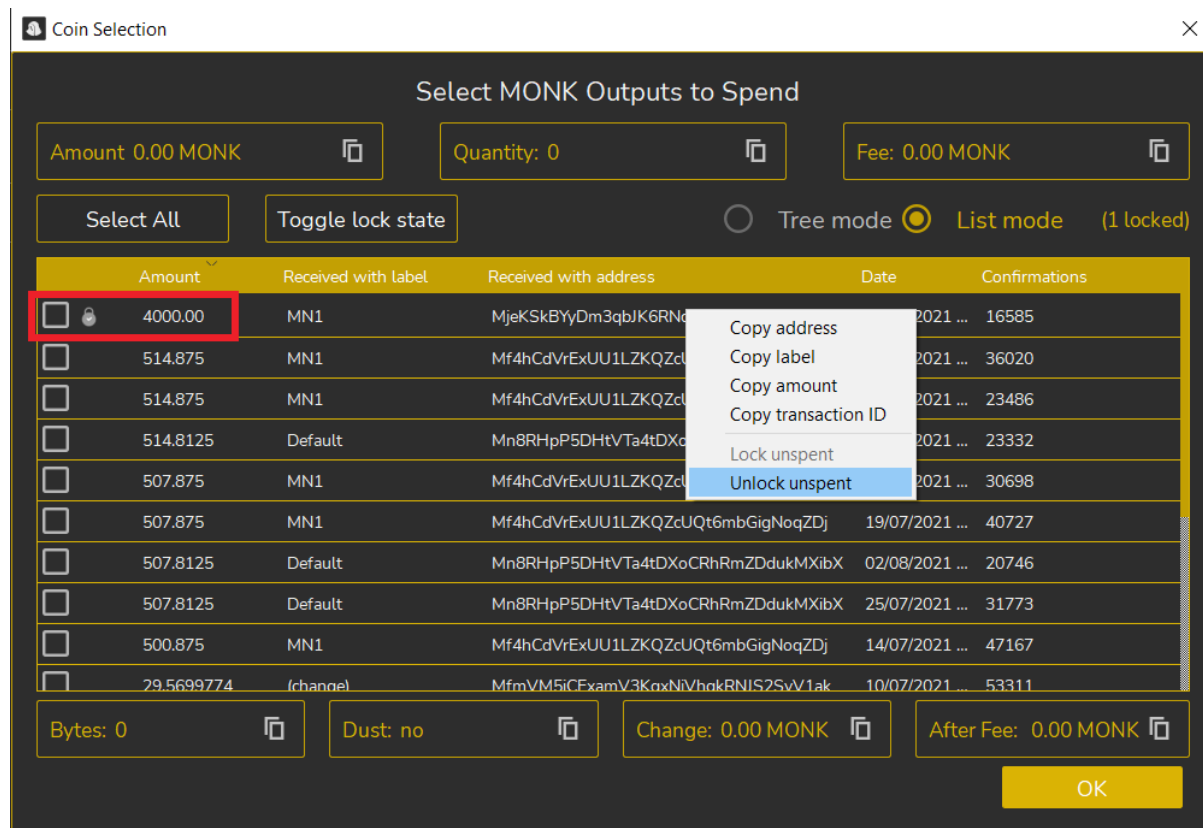

Now we need to unlock the old collateral (the previously blocked 4000 coins transaction).
To do this we go to

- Send
- Coin Control

Now a window will open, as we can see in the image the masternode transaction is labeled with a padlock icon.

We have to right click on it and choose Unlock unspent to unlock it.

Now we need to send a new 8000 Monk transaction to ourselves.
So

- Click on Receive
- Generate a new address
- Modify the label (we use the name of the old masternode again in our case MN1)
- Let's copy the address

Now let's go to the menu

- Click send
- Paste the address
- Insert exactly 8000 in the amount
- Click send

The screenshot shows the 'Send' interface of the MONK wallet. The top bar displays the balance as 4,175.66 MONK. The left sidebar contains navigation icons: HOME, SEND (circled in red with a red '1'), RECEIVE, CONTACTS, MASTER NODES, and SETTINGS. The main area is titled 'Send' and includes the subtitle 'Send public coins (MONK)'. It features a form with the following fields: 'MONK address or contact label' containing the address 'MuKuQAGbNx6jDKoVfCJq5qnavwnomMbTSW' (annotated with a red box and '2'), 'Amount' set to '8000' (annotated with a red box and '3'), and an optional 'Address label' field with 'MN1'. At the bottom, a summary box shows 'Total to send 8,000.00 MONK' and 'Unlocked remaining 175.66 MONK'. To the right of this box are buttons for 'Customize Fee', 'Clear all', and 'Add recipient'. A red '4' is placed next to the 'Send' button, which is highlighted with a red box.

CANCEL

SEND

Now let's go back to the home screen and we can see that the payment to ourselves is confirmed after 6 confirmations (about 6 minutes).

Now let's go to the Debug Console and click on it.

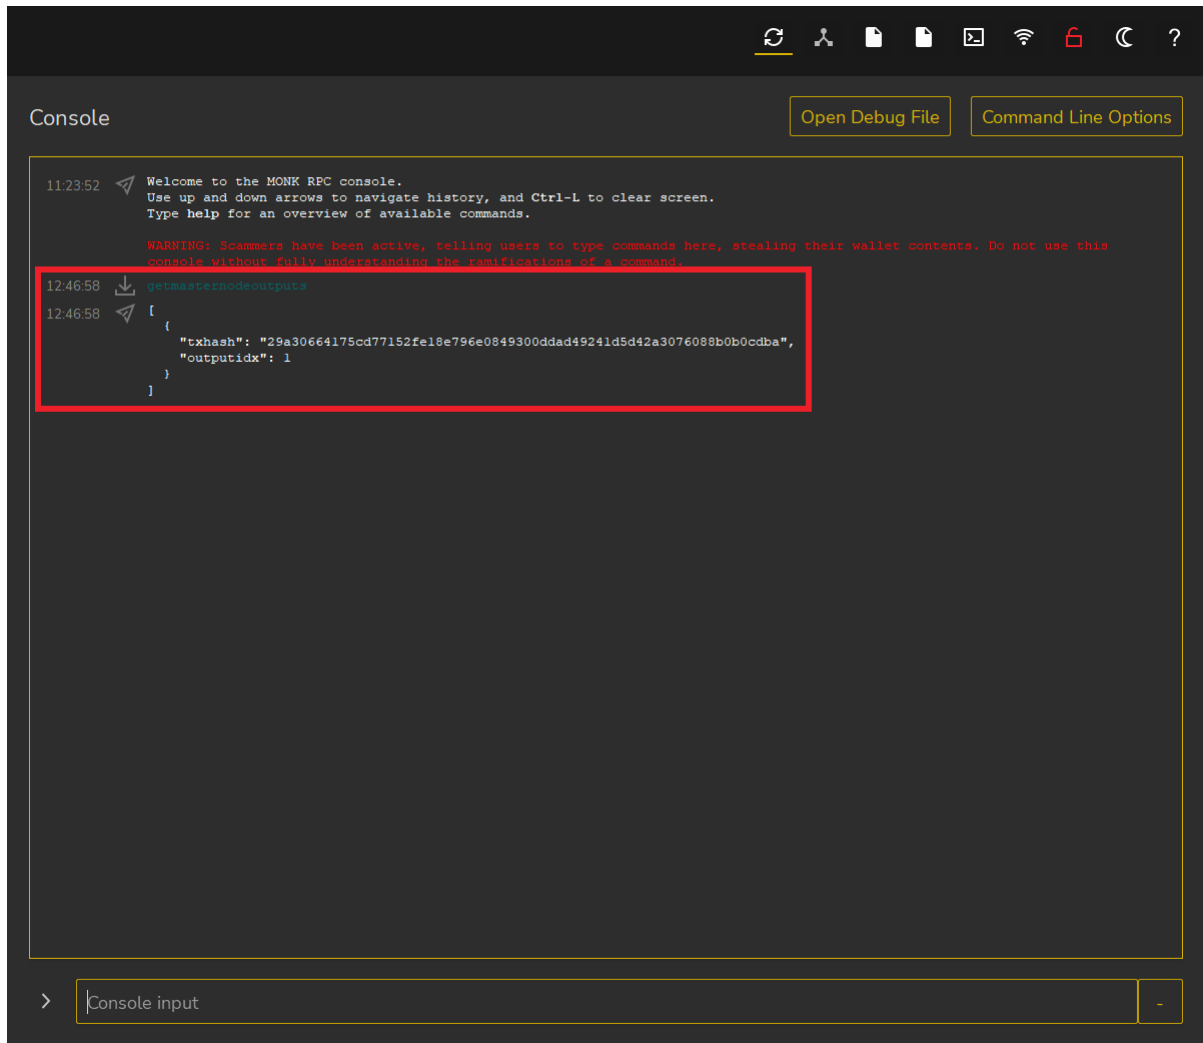

The debug console will open where we have to enter the command below

- getmasternodeoutputs

Press enter to get the following information

- hash of the transaction
- outputidx

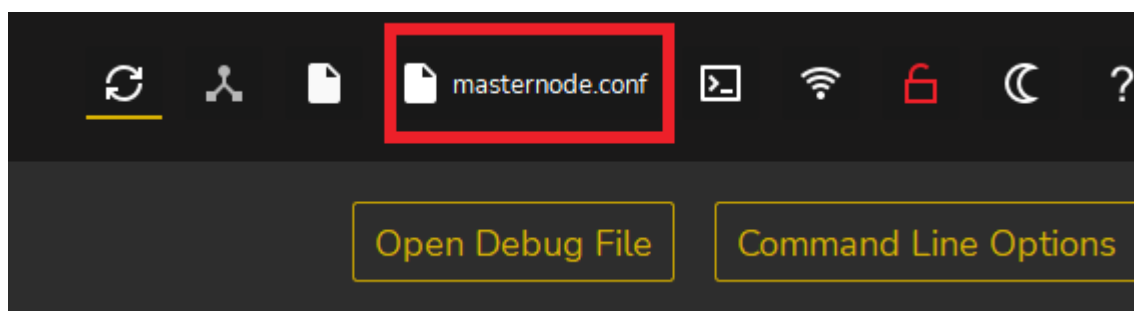

The screenshot shows the MONK RPC console interface. At the top, there are icons for refresh, share, file, terminal, network, lock, moon, and help. Below these are two buttons: "Open Debug File" and "Command Line Options". The main console area displays the following text:

```
11:23:52 Welcome to the MONK RPC console.  
Use up and down arrows to navigate history, and Ctrl-L to clear screen.  
Type help for an overview of available commands.  
  
WARNING: Scammers have been active, telling users to type commands here, stealing their wallet contents. Do not use this  
console without fully understanding the ramifications of a command.  
  
12:46:58 getmasternodeoutputs  
12:46:58 {  
  "txhash": "29a30664175cd77152fe18e796e0849300ddad49241d5d42a3076088b0b0cdba",  
  "outputidx": 1  
}
```

The output is a JSON object containing the transaction hash and the output index. The command and its output are highlighted with a red box. At the bottom, there is a "Console input" field with a greater-than sign icon and a minus sign icon.

Let's go to msternode.conf and click on it.

The Notepad will then open in which we need to replace

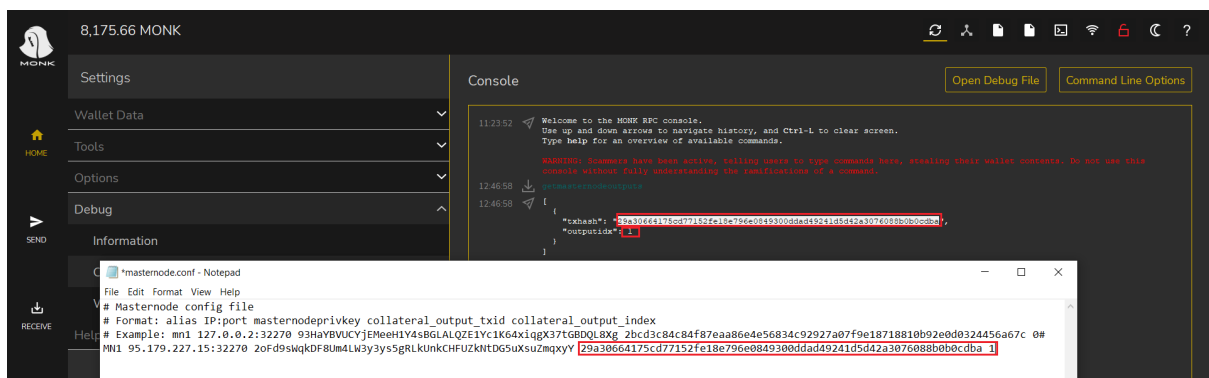

- hash of the transaction
- outputidx

From the console we copy

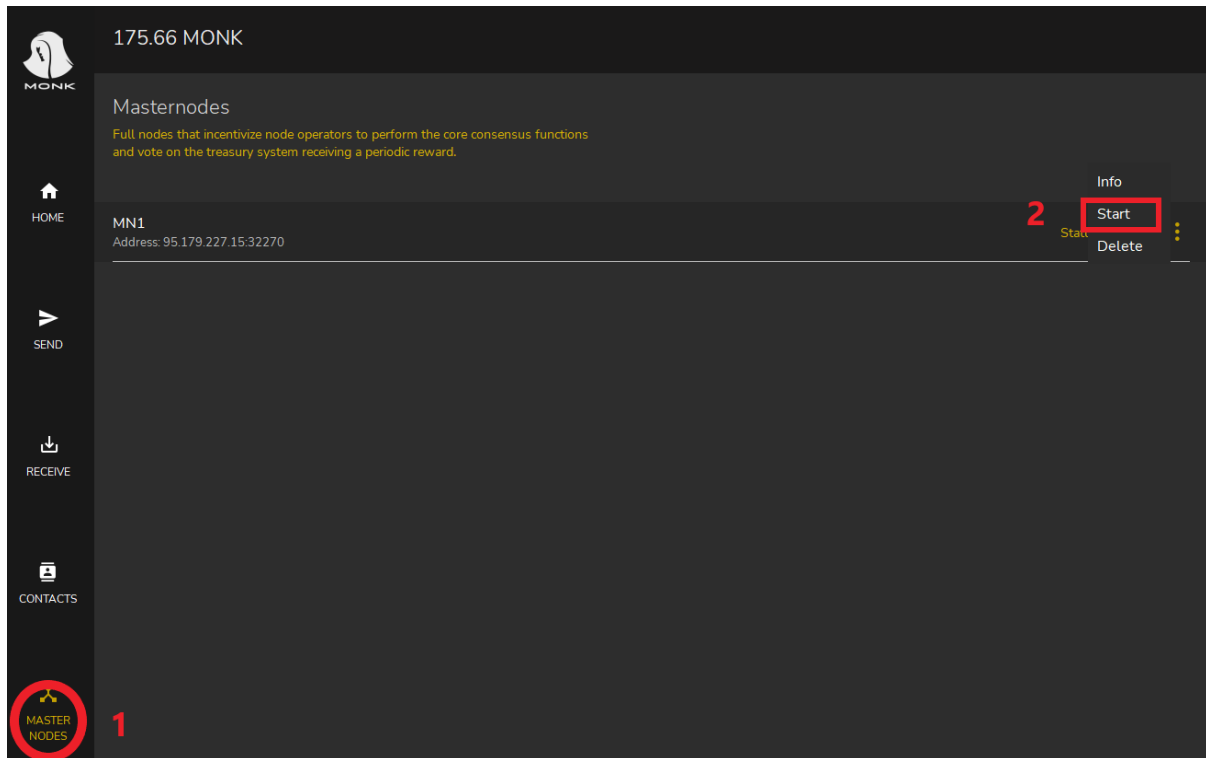

- hash of the transaction
- outputidx

Let's replace them in the Notepad.
We save and restart the wallet.

From the home screen

- Click on masternodes
- Click on the three dots and choose start

Now that the collateral is up to date, our node is ready!
